

Albania: Reduced production of hydro power plants

Categories : [SEE Energy News](#)

Date : August 1, 2013

Daily production of hydropower plants in Albania currently is 13 million kWh in these summer days, while requirement is about 19.5 kWh. According to the sources of Albanian Power Utility Company (KESH), although the flow fell down, energy produced in the hydro power plants was maintained in optimal values.

Water level on HPP Fierza is 291.4 meters with flow of 80 cubic meters. Water level on HPP Koman is 175 meters with flow of 40 meters while water level on HPP Vau and Dejes is 74.6 meters. Currently 6.5 million of kWh is imported from which ČEZ Dstribution imported 3.6 million to cover network losses.
