

Koncar announced that its company “Koncar - Engineering for Energy and Transport (KET)” completed the project of construction 220 kV switchyard as part of TPP Sisak. As stated, this is a reconstruction of the plant and power transformers within the investment project for construction of combined-cogeneration power plant, namely the unit C, with the electric power of 230 MW and output of 50 MW.

Thereby, the works were carried out on the principle of ‘turnkey’, and project includes the delivery of primary and secondary equipment, delivery of steel girders devices and portals, connecting suspension equipment, power transformers (190 and 95 MV A) and transformer of own consumption (32 MV A), performance of all necessary construction and commissioning. In doing so, besides KET, in business also participated the other Koncarcompanies, and it was also incorporated Koncar remote control system ProzaNet.
