

Doosan Power Systems has been awarded two major refurbishment contracts by Elektroprivreda Srbije (EPS) for the Nikola Tesla power plant complex in Serbia, further cementing a successful relationship that has already seen the company carry out four major boiler rehabilitations at the complex in recent years.

The latest wins will see Doosan Power Systems undertake the dismantling and installation of boiler pressure parts on the First Phase Revitalisation of Nikola Tesla Unit B1, a 620 MW lignite-fired tower boiler. Valued at around
