

☒ How would energy production and consumption in Serbia change as it harmonizes its environmental laws and regulation with the rest of Europe? How to repair carbon footprint and energy profile of our country? What is the connection between electricity production and carbon emissions?

These will be some of the issues discussed at the first international symposium on Environment and Energy, organized by the Serbian Wind Energy Association (SEWEA) and the National Alliance for Local Economic Development (NALED), with the support of the European Wind Energy Association (EWEA).

The symposium
