Date : April 18, 2012

The Electric power of Serbia started the export of electricity, daily 10mil kwh, stated EPS GM Dragomir Markovic.

The export of electricity is possible due to the improvement of hydrological situation in the country and bigger electricity generation in Serbian hydro power plants.

Majority of Serbian electricity comes from thermal power plants, TENT power plants are the biggest sole producer of electricity in the region of Balkans also.

He stated that the Djerdap hydro power plants are producing 23 mil kwh daily, which is big improvement in comparison with previous period.

The price of exported electricity is lower than last winter but its satisfactory, stated Markovic but not pr
