

As of November 21, Elektroprivreda (EPCG) exported electricity worth EUR 25.6 million, said the president of the company's Board of Directors, Milutin Đukanović.

- From November 21 until today, we exported electricity worth EUR 25.6 million for EPCG - said Đukanović on Twitter.

As previously announced by the company, the export of surplus electricity started thanks to a favorable hydrological wave and a large amount of precipitation in the pre-thon period. This export trend is also expected in the next five months, when Elektroprivreda is expected to have a profit of several tens of millions of euros, eKapija reports.
