

Around 71 million EUR of electricity was exported from Montenegro in 7 months, according to the data from Montenegro's Statistics Department.

Electricity import amounted around 31 million EUR in period from January to July this year and it is drastically decreased with the reference to the same period last year when our country imported 74 million EUR.

One of the main reasons for electricity import decrease is reduction of production to a half in Aluminum Combine Podgorica (KAP) at the end of September last year.
