

**The Macedonian Electricity Market Operator MEMO** has published a list of the largest electricity traders in the country in its balance sheet for 2022, in which, apart from the largest producer [AD ESM](#) and the universal supplier **EVN Home**, importers also dominate. MEMO data show that there are no significant changes in the structure of electricity sales, despite the energy crisis that was announced in mid-2021 and the need for large investments in domestic production capacities.

**As expected, AD ESM is in first place with 4.43 TWh sold, while EVN Home sold 3.744 TWh of electricity to households and small consumers.**

In third place is the gas power plant AD TE-TO with sales on the free market of 946.5 GWh. The fourth is EVN Snaabdevanje, a daughter company of EVN that sells electricity on the free market with realized sales of 961.5 GWh.

Another daughter company of EVN, **EVN Elektrodistribucija**, is in the first stages. The operator covering losses in the distribution network achieved a sales volume of 855.9 GWh.

EVN Trading, another daughter company that trades in imported electricity, sold 808.3 GWh, while in seventh position is the Slovenian company GEN-I with 594.3 GWh sold.

They are followed by the Greek EDS, known for supplying state institutions, with 430 GWh, **ESM Prodaja**, a daughter company of AD ESM, which on the free market primarily supplies hospitals, schools and other institutions with 403.4 GWh, and the [thermal power plant Negotino](#), with 401, 2 GWh.
