

☒
Director of the Company “Hidroelektrane na Drini”, Mile Lakic said to Srna agency that electricity production plan for HPP “Visegrad” has been exceeded 40% in three months. -Thanks to positive hydrology, we produced 420 MW of 301 planned MW of electricity from January until the end of March. This trend is going to be continued in April also- Laketic stated.

All three HPP’s aggregates of 315 MW installed power are working depending on system need and machines produced 187 of 120 planned GWH or 56% more than it was planned.

-Motion readiness of facility is on maximal level- Lakic said

1.200 m³ per second water inflow was recorded in HPP “Visegrad” this morning, although expected inflow for this part of year is around 400 m³ per second.
