**Date :** March 27, 2015

ABB has signed in Serbia a valuable contract for supply and installation of medium voltage plant, transformers, frequency regulators, as well as low voltage motors and equipment for the projects of Reconstruction and modernization of conveyor belts for the Mining Basin Kolubara.

ABB will perform the delivery of medium voltage plant, transformers, frequency regulators, as well as low voltage motors and equipment and provide help to the partner company during the putting into operation of ABB's equipment. Dismantling of old, as well as the installation of new equipment, installation of cables and connection of the equipment will be performed by MB Kolubara with its own forces, while the supervision over montage, testing and putting into operation, as well as drafting of the final design will be done by the company Micro Control.
