

Water pumping from the open pit mine “Veliki Crljeni” began over the weekend, one of two completely flooded Tamnava mines in the Mining Basin “Kolubara”. Water level was lowered by three inches for two days, and pumping with six pumps is continuing.

Investment repair of Drobilana, coal preparation plant on Tamnava has been completed and tests were done. Three trains with 4,500 tons of coal from the landfill have been loaded and ready for collection in TENT.

Employees in MB “Kolubara” work intensively to repair damage from floods in the Kolubara mines.
