

 Serbia Energy brings latest brief on EPS hydro power plants projects, both small and bigger hydro power generation facilities. Assessment period 2011.

#### HPPs Upper Drina

The Drina River represents the most important unused hydro potential within the region. Catchment area of River Drina is 19,570 km<sup>2</sup>, while average precipitation is 1,100 mm. It is characterized by extremely uneven water table: ratio of minimum and maximum flows reached 200 m<sup>3</sup>/s. Average annual flows at the spring is 157m<sup>3</sup>/s and at the confluence 425m<sup>3</sup>/s.
