

[Serbian energy exchange \(SEEPEX\)](#) informed all interested parties that it will organize a workshop on 28 March related to the upcoming launch of intraday market in June. The purpose of the workshop is to present the **Serbian continuous intraday market**, which will be launched in June 2023, to all interested parties. This will be the first event in a row of events and workshops that will be organized to promote the continuous intraday electricity market.

The development of a competitive, transparent and reliable intraday **electricity market in Serbia and southeastern Europe** will contribute to the increase in volume of electricity trade in the entire region.

The operation of continuous intraday market will rely on M7 trading system, the state-of-the-art industry-standard in terms of performance. Clearing and settlement will be performed by the **European Commodity Clearing (ECC)**.

SEEPEX members will thus benefit from high-level standards both in terms of trading and clearing services. At the very beginning, continuous intraday market will operate in the isolated mode, with intention to join a single EU cross-zonal intraday electricity market as soon as possible (Single Intraday Coupling - SIDC).

[Alpine-Adriatic Danube Power Exchange \(ADEX\)](#), the first regional power exchange for central and southeastern Europe, was officially established on 23 December 2022.

The short-term milestones of ADEX will be to deliver a new intraday market in Serbia and coupling the pivotal Serbian day-ahead market with the pan-European Single Day-Ahead Coupling (SDAC) as soon as possible.
