EMS was delivered a second transformer station for position Belgrade 20, the project includes 3 transformers in total. The transformer unit 100/110 will be installed in next few days.

Firs energy transformer unit was delivered and installed on 29th of February while the delivery of third transformer is expected by end of the weekend.

The procurement of this transformer units is very important for development of national grid and energy system. Only during 2008/2012 EMS procured 15 new units which significantly improved and modernized the complete grid system.

This facility is of key importance for national grid network, and specially for Belgrade are. Almost 600.000 inhabitants of central areas of the capital as well as several big industrial consuming centers will be supplied from this new facility complex.
