

Serbia's first 6 MW of installed wind farm is scheduled to become operational in the end of 2011

Categories : [Uncategorized](#)

Date : January 31, 2011

Wind power is expected to become a significant part of the renewable energy portfolio in Serbia in the future but the first 6 MW of installed wind farm is not scheduled to become operational until the end of 2011.

Landlocked and surrounded by eight nations, Serbia is dealing with a sluggish economy while it tries to both mitigate recent military aggression and develop a much-needed renewable energy sector. Wind power is expected to become a significant part of the renewable energy portfolio in Serbia in the future but the first 6 MW of installed wind farm
